

SYSTEM AND METHOD FOR GENERATING USABLE IMAGES

Abstract

The present invention includes systems, methods, and computer readable media for locating, sorting, and modifying images for future use. A conversion engine submits search requests to an image search engine and accepts the received results. The conversion engine arranges the search results according to selected visual characteristics of the image. Editing tools can then convert the results of the image search into vector based images which can be easily manipulated and enable users to modify the re-ranked images for future use.
